DEFIBRILLATION

EURODEFIPADS®

EURODEFIPADS®

MULTIFUNCTION PADS

Manufactured with high-quality materials, subjected to strict and continuous process control and thoroughly tested for compatibility and compliance with international standards, EURODEFIPADS® ensure both safety and excellence.

Easy to use, they deliver optimal clinical performance in both emergency situations and elective procedures.

EURODEFIPADS® is a complete line of adult and pediatric disposable multifunction electrodes for defibrillation, synchronized cardioversion, external cardiac stimulation and ECG monitoring with different connectors compatible with the main defibrillators present in the market.

Radiotransparent models (with radiolucent cable and pads) have been designed for use in EP labs, haemodynamics and during radiographic and angiographic procedures.
Lead-out preconnected models (marked with the suffix W) have the cable and connector placed outside the pouch, so the pads can be connected to the defibrillator before opening the packaging.
This design is especially useful in emergency situations.

EURODEFIPADS® are classified as Class IIb medical devices in accordance with the Medical Device Regulation (EU) 2017/745 (MDR) and are CE marked following assessment by a Notified Body, ensuring full compliance with the highest standards of safety, performance and quality.
